PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience designing scalable backend systems using Python, Django, Django REST Framework, FastAPI, and PostgreSQL. Built enterprise-grade master data platforms, REST APIs, configurable workflow engines, and SAP integrations. Strong working knowledge of AI/ML integrations including production RAG pipelines, LLM fine-tuning, and multi-agent systems with LangChain and CrewAI. Delivered measurable business outcomes (85% efficiency gain, 60% turnaround reduction, 92% transcription accuracy).

TECHNICAL SKILLS

Languages and Frameworks: Python, Django, Django REST Framework, FastAPI, REST APIs

Databases: PostgreSQL, MySQL, Redis, pgvector, Qdrant, Pinecone

Cloud and Infra: AWS, GCP, Docker, Celery

AI and LLM: LangChain, CrewAI, RAG Pipelines, LLM Fine-Tuning

Machine Learning: Scikit-learn, XGBoost, Pandas, NumPy, Time Series Forecasting

Tools: Tesseract OCR, Speech-to-Text, MLOps

PROFESSIONAL EXPERIENCE

Software Engineer (Python / AI-ML), NeoSOFT, Ahmedabad

June 2024 - Present

- Built enterprise Master Data Management (MDM) Platform for media client using Django and DRF, managing 60+ master entities with standardized CRUD, soft delete, audit logging, JWT auth, and hierarchical RBAC
- Designed configurable workflow engine with rule-based routing, multi-level approvals, and reprocess history; integrated SAP OData for bidirectional Business Partner sync
- Built production Hybrid RAG AI Assistant on Django + pgvector (semantic + full-text RRF, cross-encoder reranking) with sub-2s latency and 3-tier conversation memory
- Developed multi-agent SQL Query System (CrewAI, 85% retrieval efficiency gain), ML Cost Prediction System (60% turnaround reduction), and OCR + Speech-to-Text pipeline (92% accuracy)
- Built XGBoost time-series forecasting for industrial sensor data with drift monitoring and automated retraining; deployed FastAPI document-intelligence service on AWS (Lambda, EC2, RDS, Bedrock)

Python Developer, Swan Softweb Solutions, Ahmedabad

April 2023 - May 2024

- Led end-to-end development of ATLAS Property Management Platform with Django, REST APIs, JWT authentication, and role-based access control
- Built property price prediction model (Scikit-learn) and collaborative filtering recommendation engine integrated into platform API
- Designed normalized PostgreSQL schemas and high-volume ingestion pipelines for third-party API data with query optimization and indexing

Python Intern, Infolabz, Ahmedabad

August 2022 - March 2023

- Developed e-commerce web application using Django with product management, order processing, and user authentication modules
- Applied ML fundamentals (Scikit-learn, Pandas, NumPy) for data preprocessing, EDA, and basic classification and regression tasks

EDUCATION

Master of Computer Applications (MCA)

Gujarat Technological University, Ahmedabad | August 2023 - April 2025 | CGPA: 7.76

Bachelor of Computer Applications (BCA)

Som-lalit Institute of Computer Application, Ahmedabad | July 2020 - April 2023

KEY PROJECTS

Master Data Management (MDM) and AdSales Platform - Enterprise Media Client

- Centralized Django REST API platform managing master data and ad-sales operations across publications, channels, business partners, and workflow orchestration; 60+ master entities with consistent CRUD, search, filter, pagination
- Business Partner: onboarding with GST/PAN/Mobile verification, dynamic document config engine, multi-level vetting + credit approval workflow, SAP OData bidirectional sync, bulk CSV migration commands
- Workflow Engine: rule-based routing with multi-level approvals, send-for-correction, reprocess history, page-level access, geography mapping
- User Hierarchy: JWT auth (custom backend, access + refresh, token blacklisting), HR SSO integration, hierarchical role-based permissions with location-based allocation
- Dynamic Rate Card Configuration and Discounting: rule-driven pricing engine with validity windows, position-based ad pricing, discount slabs; Classified Master with rate-card linkage
- Sales Assistant: Hybrid RAG AI Assistant with pgvector hybrid retrieval (semantic + full-text RRF, cross-encoder reranking), 3-tier memory, zero-hallucination grounding
- Multi-Agent SQL Query System: CrewAI orchestration for natural-language DB queries; 85% retrieval efficiency improvement
- LLM Fine-Tuning: fine-tuned GPT-4o and Llama-3.1-8B-Instruct on editorial datasets with rule-based + semantic-similarity validation for publication-quality output

Technologies: Python, Django, DRF, FastAPI, PostgreSQL, MySQL, Redis, Celery, pgvector, LangChain, CrewAI, OpenAI Fine-Tuning API, Ollama, SAP OData, GCP, Docker

AI-Powered Document Intelligence Service on AWS

- Built FastAPI-based document intelligence microservice deployed on AWS EC2, exposing REST endpoints for upload, async processing status, and structured-result retrieval
- Implemented S3-driven ingestion: client uploads to S3 trigger Lambda functions that extract text, call AWS Bedrock (Claude / Titan) for summarization, classification, and entity extraction, and persist structured outputs to RDS PostgreSQL
- Designed schema for documents, extraction jobs, and per-field confidence scores; routed low-confidence outputs to a human-review queue for manual verification
- Implemented IAM least-privilege roles per Lambda, CloudWatch logs and alerts, JWT-protected API endpoints, and auto-scaling group on EC2 for burst traffic
- Optimized Bedrock prompt design and chunking strategy to balance cost, latency, and accuracy across heterogeneous document types (invoices, contracts, KYC forms)

Technologies: Python, FastAPI, AWS Lambda, EC2, RDS PostgreSQL, S3, AWS Bedrock, IAM, CloudWatch

ATLAS Property Management and Real Estate Platform

- Built large-scale property platform with Django, JWT auth, role-based access control, REST APIs, and admin workflows
- Integrated property price prediction (Scikit-learn) and collaborative filtering recommendation engine into platform API
- Designed normalized PostgreSQL schemas with optimized indexing and migration scripts for third-party API ingestion

Technologies: Django, Python, PostgreSQL, Scikit-learn, REST APIs, JWT

Time Series Forecasting of Industrial Sensor Data

- Performed EDA on multi-sensor telemetry; engineered lag features, rolling statistics, and exogenous regressors for time-series modeling
- Evaluated Random Forest, XGBoost, and LSTM models; selected XGBoost on lowest RMSE with grid-search hyperparameter tuning and time-series cross-validation
- Integrated production prediction service with live benchmarking dashboard for drift detection and automated model retraining on threshold breach

Technologies: Python, Scikit-learn, XGBoost, Pandas, NumPy, Time Series CV, MLOps
